

ABYAN HISYAM AL'AMMAR

Backend & AI Integration Engineer

Yogyakarta, Indonesia • +62 831 9570-0290 • abyanhisyamm@gmail.com • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Bachelor's degree of Informatics student at Universitas Amikom Yogyakarta (GPA: 3.98/4.00) with hands-on experience in backend development, AI integration, and Web3/blockchain engineering. Built production-grade systems in Go and Python, deployed on Monad Testnet and Railway. Proven track record in national-level hackathons. Curious about why software is built, not just how.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript/JavaScript, C++, SQL, Solidity
Backend: FastAPI, Go Fiber v2, Node.js/Express, REST API, BullMQ, Redis, PostgreSQL
AI / ML: LangChain, Multi-Agent Orchestration, RAG, Prompt Engineering, OpenAI/Claude/Gemini/Groq APIs
Blockchain: Ethers.js, go-ethereum, Solidity 0.8, Foundry, Monad Testnet, Polygon Amoy
DevOps: Docker, Railway, Vercel, Git/GitHub

WORK EXPERIENCE

- Coordinator & Lab Assistant — Advanced Programming** | Universitas Amikom Yogyakarta *Sep 2025 – Jan 2026*
- Coordinated 10–12 lab assistants to standardize teaching materials and delivery quality across all sessions.
 - Served as primary escalation point for complex technical issues and cross-functional communication between students, assistants, and lecturers.
 - Conducted detailed code reviews focused on algorithm efficiency and clean coding practices.
- Lab Assistant — Data Structures** | Universitas Amikom Yogyakarta *Mar – Jul 2025*
- Instructed 50–60 students in Big O notation and data structure selection (Stack, Queue, Tree, Graph) with guided C++ implementations; managed grading for ~25–30 students.
- Lab Assistant — Programming** | Universitas Amikom Yogyakarta *Mar – Jul 2025*
- Instructed 50–60 students in core programming concepts (syntax, OOP, branching, loops), contributing to an 85–90% A-grade rate; supported grading workflows and developed assessment questions.

PROJECT EXPERIENCE

- CDSS AI Keperawatan — Agentic Clinical Decision Support System** *2025 – Present*
Research Collaboration · Backend & AI Integration Engineer
- Architected a multi-agent swarm orchestration system (Flash/Medium/Pro tiers) using LangChain for zero-shot, maker-checker, and parallel critic-review clinical workflows.
 - Built a FastAPI backend with RASP security, PII sanitization (HIPAA & UU PDP), and a tamper-evident WORM JSONL audit ledger for mediko-legal traceability.
 - Engineered custom RAG pipeline over local clinical reference databases (SDKI/SLKI/SIKI, NANDA/NOC/NIC) for hallucination-free diagnostic code retrieval.
 - Stack: Python, FastAPI, LangChain, PostgreSQL, Docker, Next.js
- Attesta — AI-Powered On-Chain Skill Verification** *Apr 2026*
Monad Blitz Jogja 2026 Hackathon · Backend Engineer
- Built the entire Go 1.23 + Fiber v2 REST API backend, implementing 9 handlers across analyze, attest, and debug pipelines with dual AI provider support (Groq LLaMA 3.3 70B + Anthropic Claude).
 - Implemented on-chain interaction via go-ethereum connecting to a Solidity contract on Monad Testnet.
- NEMOS — Web3 Revenue-Based Financing for MSMEs** *Mar 2026 – Present*
Backend Developer & AI Engineer
- Architected a Fiat-to-Chain bridge (Node.js/TypeScript + Xendit) with immutable Merkle Tree audit trail anchored on Polygon Amoy Testnet.
 - Built standalone AI Vision microservice (Python + FastAPI) integrating NVIDIA NIM VLM (675B) for receipt OCR with 85% confidence routing threshold.

EDUCATION

Bachelor's Degree of Informatics (GPA: 3.98/4.00) — Universitas Amikom Yogyakarta *Sep 2023 – Present*
Relevant: Database Systems, AI, Big Data & Predictive Analytics, Algorithms, Web Programming

AWARDS & COMPETITIONS

Top 400 Ideation Proposal — Hackathon, Bank Indonesia (pidi.id) *May 2026*
Top 10 Finalist — Business Plan Competition, Universitas Ciputra *May 2026*
